ESSENTIAL COMPONENTS FOR EVERY STAGE OF CONSTRUCTION

Welcome to SDG.

Your essential
construction partner.

Stronger, together.

We work with manufacturers, contractors, engineers and designers, supplying essential components that improve safety, enhance quality and drive efficiency at every stage of construction.

At SDG we are trusted suppliers, and experts in construction solutions. We are planners, collaborators and designers; fixers, thinkers and expert problem solvers. We're an end-to-end construction project partner, bespoke and best in class. By working closely with our customers; by adding value at every stage; by doing everything they expect and so much more, we share their success and become stronger, together.

recostal® Standard Type RSH Starter Packs

recostal® Starter Packs type RSH meet the requirements of DIN EN 1992-1-1 for the highest surface category "key profiled" in the case of transverse loads.

The deciding factor for the designer

recostal® Starter Packs type RSH meet the requirements of the DBV Bulletin "Rückbiegen von Betonstahl und Anforderungen an Verwahrkästen nach Eurocode 2" ["Rebending of reinforcement steel and requirements for continuity strips according to Eurocode 2"] (issue January 2011) for the highest joint category "key profiled" in the case of transverse stresses. No national approval required!

Technical data – RSH Starter Packs

- Trapezoidally profiled starter packs, joint category "key profiled" according to DIN EN 1992-1-1, highest shear force bearing capacity
- Concrete reinforcement steel according to BS EN ISO 17660 and BS8548

- 6 standard profiles, bar widths 12 cm – 22 cm, smaller or larger bar widths on request
- Standard unit length L= 1.25 m, fixed lengths up to 2.50 m on request

Application

recostal® Starter Packs ensure time-saving installation of secure connections between steel reinforced concrete construction parts that are created with different pour sequences. Therefore, floor slabs, walls or staircases can be installed subsequently with rigid connections corresponding to the highest joint category "key profiled".

The large variety of shapes offers the perfect connection for many different design situations; special types for specific solutions are also available. The standard range includes starter packs with 12mm and 16mm diameter and L=1.25m unit lengths. Unit lengths exceeding 1.25m, the production of special types and the combination with waterproofing systems as well as solutions for entire projects are possible on request.

Advantages:

- Strong, robust galvanised sheet metal starter packs, dimensionally stable
- Cost and time effective installation, starter packs are simply nailed to the formwork
- Easy removal of the sheet metal covers due to their special design
- Trapezoidally profiled box for excellent bond
- Various possible combinations provide a solution for all common installation details

Increased corrosion protection

Type RSH is installed with a planned 25 mm recess

Key Profile

RSH active - Starter Pack with active waterproofing

RSH Starter Packs can be manufactured with an active bentonite coating on both sides for the application in construction joints exposed to water.

Female Couplers

This is the cast in part of the system, it comprises a socket swaged onto a high yield reinforcement bar. The socket area is larger than the bar ensuring that the bar itself is the weakest part of the coupler. Also available in Stainless Steel.

Bespoke Couplers

Female Double Ended

Male Double Ended

Alligator Splice Off Couplers

The Alligator Couplers are used for splicing any grade or profile of reinforcing bar. These couplers are made for reinforcement steel with diameters in the range of 10mm to 40mm. Connection is made by inserting bars into both ends of the coupler. The breaking bolts are then screwed by hand and tightened by ratchet wrench until bolts shear off. These couplers can be used in particular cases to replace the damaged reinforcements with new ones and to connect to the old structure.

Advantages:

- No need for threading or any other bar preparation
- These are fast (simple) easy to use
- No special skilled labor required
- No welded components
- Performs as a continuous piece of rebar
- Allows for easy visually inspection

Dywidag Bar

A highly effective system of high tensile steel bar designed for holding formwork panels in place. The original, high quality Dywidag Threadbar may not be welded due to its chemical composition and must be protected against all kinds of weld spatter.

PRODUCT CODE	PRODUCT DESCRIPTION	STEEL GRADE	MAX. LOAD	WORKING LOAD (KN)	PRODUCT SIZE

Dywidag Wing Nuts

With different Waler Plates, Wing Nuts can be used as anchor nuts both for timber and steel walings, overcome by applying hammer strokes to the wings. They can be fixed and loosened using a hexagon wrench or threadbar. If necessary, a clamping effect can be attained or overcome by applying hammer strokes to the wings.

Robusta Drop in Anchor

A drop-in anchor specifically designed for the use with 15mm formwork Tie Rod Bars. It is ideal for low load applications, such as fixings for handrails into existing concrete. For safety reasons we state that admissible loads for a low concrete strength of 15M/mm. This means in practice that the anchors are often installed the next day after concreting and are already loaded.

Tie Bar Form Anchor

Tie Bar Form-Anchor is versatile, non-corrosive and used mainly for securing single-sided and climbing formwork. Easily fixed using the plastic cone locator enabling quick formwork erection, with no drilling of plywood. Can also be used for securing slab edge formwork, guard rails, etc. For use with 15mm Dywidag Tie Rods. Safe working load 50kn.

EXPANSION JOINT MATERIALS

Texslip Membrane

Slip membranes are produced from an ultra-heavy 250kg/m³ density polyethylene, 2mm in thickness, it is used in sliding joints where low friction resistance material is needed, but a high resistance to load is also required. Normally used in two layers to form a low friction load bearing sliding joint.

Foam Frost Mats

Frost Mats – Perfect for winter concrete laying and curing. When the temperature drops, concrete pours and curing can be difficult – an easy and inexpensive solution is the use of thermally insulated frost mats. The thermal insulation effect keeps the concrete warm long enough for a safe curing and reduces the loss of hydration. The frost mats are lightweight, reusable and recyclable.

SAFETY SYSTEMS

Safety Caps

The protection cap is screwed onto the reinforcing bar and fits tightly and securely due to the ribbed construction on all reinforcement diameters. This is not possible with conventional caps.

The cap can be used several times and increases the visibility of danger points by the high visible colour, yellow.

PRODUCT CODE	PRODUCT DESCRIPTION	PRODUCT SIZE

Nevosafe®

The Nevosafe® safety strip can be easily and quickly installed due to the integrated handle strip. It can be applied in horizontal and vertical positions and can be re-used. The Nevosafe® is available in high visible colours to increase visibility.

Range includes:

- Nevosafe®
- Nevosafe® with Steel Core

Nevosafe® TS

For application during storage and transport of precast concrete elements. Safety strip for securing cantilevered reinforcing bars.

CONCRETE

Fibre Concrete Bar

Ensures concrete cover for high requirements.

Getting the right amount of concrete cover is essential for the durability of reinforced concrete structures. Fibre concrete spacers ensure correct concrete cover before and during concreting. They are characterized by high compressive strength and excellent chemical and physical resistance.

Advantages:

- Cement-bound spacers, no heat/cold deformation
- Absolute guarantee of concrete cover
- Various attachment options for quick and easy use
- Precise positioning
- Homogeneous bond, no hairline cracks between spacer and concrete
- Fire-resistant according to the maximum requirements of DIN 4102 - Class A1 (non-flammable)

CONSTRUCTION GROUTS, MORTARS AND RELEASE AGENTS

RELEASE AGENTS

Omnilease Bio

Vegetable Oil Based

Vegetable oil-based release agent which forms a thin, colourless film on the surface of formwork. It facilitates the even dispersion of the concrete and assists bubble resorption during vibration. It is non-toxic, environmentally & user friendly and produces quality pre-cast finishes.

Epicon Grouts

EPICON GROUT L – Epoxy Grout: a three component pourable free flowing high strength grout for gaps over 20mm.

EPICON GROUT M – Epoxy Grout: A lightly filled pourable grout for free flow gap grouting, recommended for gaps between 5mm – 30mm.

EPICON GROUT S is based on solvent free epoxy resins. It is one of three epoxy grouts in our range which are specified below. These cover the majority of grouting and fixing applications encountered within civil engineering and the construction industry in general, where the mechanical properties must be of the highest order. Tropical versions of the epoxy grout range are available for large pours and warmer climates. Epicon Grout S is designed to comply with the requirements of EN1504 Part 5, due to its crack injecting / gap filling applications.

TMC002	Hi-Flow GA Grout	20 Kg

Crack Injections Resins

A low viscosity epoxy injection resin for injection into concrete, masonry and brickwork to consolidate the structure and prevent ingress of moisture.

Also available as a Thixotropic epoxy injection resin designed to flow freely while under pressure.

Can be supplied as a prepacked kit containing Epicon injection resin and all ancillary equipment to enable small scale crack injection to be carried out by experienced operatives in either low viscosity or Thixotropic versions.

CEMENTITIOUS REPAIRS & PAVING PRODUCTS

Deck Repair Rapid

Polymer modified cement repair mortar characterised by its high early strength development and rapid moisture loss. The material has been designed to comply with the requirements of the Ha standard BD27/86 clause 6 and is an ideal material for the repair of bridge decks prior to waterproofing.

PRODUCT CODE	PRODUCT DESCRIPTION	PRODUCT SIZE
NUF027	Deck Repair Rapid	25 Kg

Nucem HB Mortar

High Build Lightweight Repair Mortar

High build lightweight fibre reinforced mortar designed for the repair and restoration of spalled or damaged concrete in the inverted and vertical plane. A prepacked material containing an SBR or acrylic gauging liquid to improve bonding and waterproofing properties of the mortar. Complies with the requirement of Ha 27.5 Kg standard BD 27/86 clause 6.

PRODUCT CODE	PRODUCT DESCRIPTION	PRODUCT SIZE
NUF041	Nucem HB Mortar	20 Kg

Nucem Mortar

Horizontal Repair Mortar

Prepacked cementitious mortar for the repair of sections between 10mm – 30mm mainly in the horizontal plane. Available with either an SBR or acrylic gauging liquid as required, guaranteed low W/c ratio. Complies with the requirements of Ha specification BD27/86 clause 6.

PRODUCT CODE	PRODUCT DESCRIPTION	PRODUCT SIZE
NUF070	Nucem Mortar	25 Kg

Nucem Primer

Repair Mortar

Water dispersed cementitious/epoxy primer tack coat for use with Acropak HB40 Mortar, Nucem HB Mortar, Nucem Mortar and Nucem Concrete. Also recommended for use when bonding fresh concrete to existing concrete.

PRODUCT CODE	PRODUCT DESCRIPTION	PRODUCT SIZE
NUF042	Nucem Primer	1 Kg

Nucem Skimcoat

Fairing Coat

Polymer modified cementitious levelling 12.5Kg 6.24 l coat with built-in flexibility and waterproofing properties at 1mm ideal for the treatment of repaired concrete and the surrounding areas to give an overall uniform appearance.

PRODUCT CODE	PRODUCT DESCRIPTION	PRODUCT SIZE
NUF043	Nucem Skim Coat	12.5 Kg

Nupatch Cosmetic Special

An easy to use cementitious compound which develops a high strength at an early age for small cosmetic repairs of both insitu and precast concrete. It can be colour-blended on site to match substrate.

Epigard

Epoxy Waterproofing Coating

Heavy duty and flexible waterproof coating protective coating for concrete and steel structures. Resistant to abrasion and chemical attack.

Protecting concrete structures including, abutments, drainage channels, silage pits & tanks.

Product Advantages:

- Long term protection
- Easily installed by brush or roller
- Resistant to agricultural and silage effluent
- Excellent mechanical abrasion resistance.

Resicon 5

Resicon 5 is a premium grade high-performance solvent free low odour pure epoxy resin based chemical injection anchoring system. As a pure epoxy resin Resicon 5 offers excellent adhesion to steel and concrete and has the highest performance and load values of all our systems. Resicon 5 is designed for heavy duty anchoring of rebar, starter bars and dowels, anchor studs, bolts, threaded bars and sockets into reinforced and non-reinforced concrete rock and stone. Its non-shrink no sag extended cure time formula makes it ideal for large diameter deep and oversized drill holes. Suitable for use underwater and in submerged holes.

JOINT SEALANTS

Hyperseal Expert 150

One Component Polyurethane

Hyperseal® – Expert – 150 is a novel low modulus expansion joint sealant, especially formulated to ensure bubble free cure even at very high temperature and humidity climatic conditions.

Recommended for sealing joints in; Insitu concrete, expansion concrete plates, precast panels, brick and block work, water tanks and swimming pools, metal frames, aluminium windows and panels, irrigation channels, glass, granite & marble.

Colour: Concrete Grey as standard. (Other colours available on request).

Two Component Polysulphide Sealant

Pouring Grade is a two part Polysulphide Sealant which cures once the two components are mixed together to give a flexible rubber seal. It has good adhesion to concrete, metals and many other common building substrates.

Gun Grade is a two part Polysulphide Sealant which cures once the two components are mixed together to give a flexible rubber seal. It has good adhesion to concrete, stone, metals and many other common building substrates. Recommended for sealing structural floor joints, parapet wall joints, concrete roadways and pavements, hard standing floor pads, joints in metal and concrete sea walls and joints in water retaining (non drinking water) structures.

SCP TANKING MEMBRANES

Bitusheet XL

Self Adhesive Waterproofing Membrane

Bitusheet XL membrane consists of a self-bonding polymer modified bitumen which is covered on one side by a tough multiply cross laminated polythene film and protected on the other side by a release sheet which is removed prior to the bonding of the material onto a suitably prepared substrate. Once the release sheet has been removed the membrane can be easily applied by roller pressure. Incorporates a 50mm selvedge on one edge to form homogenous overlap joints. Bitusheet XL is intended for use as a self-bonding vertical or horizontal damp proof membrane in tanking below ground structures, subways and retaining walls. BBA Approved.

Dual Seal Membrane

Self Sealing Membrane

Dual seal is a high performance self-swelling, self-healing waterproofing membrane comprising of a thick, tough, high density polyethylene sheet laminated to 4Kg/m2 of quality Bentonite granules. The Bentonite used in the manufacture of Dual Seal is capable of repeated cycles of wetting and drying without deterioration of its sealing properties and has a life expectancy measured in thousands of years (BBA Certified). It has WRAS approval for use with potable water.

Dual Seal has been specifically developed for use as a high-performance waterproofing membrane to provide a totally watertight barrier in below ground concrete construction, including basements, underground car parks, plant rooms, access tunnels etc. Dual Seal Membrane can be installed in damp conditions and is, therefore particularly suitable for use as a roof waterproofing system for each covered potable water reservoirs.

Hyperdesmo-HAA

Polyurethane Liquid Membrane

Hyperdesmo® – HAA is a unique single component polyurethane liquid membrane, based on the successful combination of Hyperdesmo® and Accelerator 3000 which throughout the years has provided applicators with a solution for a fast curing, bubble free thick layer membrane. Our commitment to R&D and investment and our efforts to continuously upgrade our chemical processing plant has allowed us to formulate a Hyperdesmo® with the Accelerator 3000 incorporated in a blocked fashion, that upon contact with humidity is released and self-accelerates the curing of the material in a similar manner as the Accelerator 3000.

Due to its unique formulation, it cures rapidly to form a completely defect free membrane with excellent mechanical and elastomeric properties. This product is ideal for use during the winter months or in climates with relatively low humidity. Furthermore, the fact that the minimum consumption can now be achieved in only one coat, reduces labour cost and eliminates previous drawbacks of the Hyperdesmo® + Accelerator system such as short working time or problems associated with using Hyperdesmo® on its own in multilayer coats adhesion failure.

Isostud Geop

Protection & Drainage Membranes

Isostud Geop is a high density extruded polyethylene (HDPE) membrane bonded to a high quality geotextile fabric providing both drainage and mechanical protection of waterproof membrane.

Isostud Geop is a studded membrane which offers great resistance to all chemical agents and to mechanical compression (>200 KN/m2). Isostud can also be used for terraces, flat roofs and roof gardens. The studs are aligned along vertical and horizontal axis: water can easily and rapidly drain from the top to the bottom of the foundation (whereas HDPE membranes with studs diagonally aligned do not offer this advantage and water drains slowly).

Aquatek Plug & Aquatek Plug XF

Rapid Setting Mortar to plug active water leaks

Stops active water leaks and seepage, even under high pressure through joints, cracks, honeycombing and holes in all structures made out of concrete, masonry, stone and renders.

Aquatek Plug has a final setting time of 3 minutes and Aquatek Plug XF of 30 seconds.

Metal Water Stop

Polymer-coated joint sheet metals for waterproofing of construction joints. The packaging in rolls reduces joints and therefore increases installation reliability. The rolls are packed in cartons, the handling on the building side is easier and so is the transportation.

In the waterproofing of concrete construction joints high demands are placed on the waterproofing technology. The fully coated joint sheet metal 160 VB waterproofing profiles ensure secure and permanent waterproofing against pressurised and non- pressurised water.

recostal® Permanent Formwork System

Shuttering units comprised of finely meshed, trapezoidally-profiled, expanded metal, designed for creating construction joints in concrete base slabs. Units are supplied to specific project-heights on site. recostal® shuttering is also available with anti-leakage material and clamps to eliminate the need to weld rebars.

For the installation of permanent lateral formwork for reinforced concrete base and floor slabs in structural and civil engineering.

Features include:

- self-supporting up to 50cm height
- no additional support necessary
- no stripping
- fast installation
- corners are simply bent into shape
- low transport costs
- installation without crane.

Range available includes:

- recostal® 1000 – for concrete slabs up to 300 mm of wet concrete
- recostal® 2000 – for concrete slabs up to 900 mm of wet concrete
- recostal® 2000 GT – for concrete slabs up to 1500 mm of wet concrete
- recostal® 2000 GTZ – for concrete slabs over 1500 mm of wet concrete.

For more information and to discuss site specific requirements please contact our office.

recostal® Shutter Strips

Shuttering Strips facilitate quick and easily installed openings of all sizes in base slabs and concrete floors. Shuttering Strips are perforated crosswise at every 50mm. The scaled profile ensures a good bond to the concrete.

Stucanet®

Render Carrier

Stucanet is a purpose designed plater and render carrier which is manufactured from heavy galvanised steel welded wire mesh into moisture absorbent chip paper. It is used specifically for exterior façade applications and is protected with a breather membrane to prevent moisture penetration.

Applications:

- Stucanet® is used specifically for exterior facade applications.
- Stucanet® can be used on a Masonry wall or Timber frame.
- Available in Stainless Steel or Galvanised.

Key Benefits:

- Quick and easy install
- Durable plasterwork and rendering
- Can be used as a dry wall alternative
- CE Complaint
- No need to remove existing render

Acoustic Insulation Layer

Application Sector

DAMTEC® rubber is a floor underlay for footfall sound reduction and thermal insulation; used in building construction and renovation. Suitable for underscreed applications and can also be used above screed especially in wet rooms under ceramic tiles.

Material: Fine granules of recycled rubber with PU elastomer bonding agent.

Appearance: Colour – Black. Surface – Fine granular texture.

TECHNICAL DATA		
Dimensions/Tolerances		
Width:	1,000 mm	± 1.5 %
Length:	on request	± 1.5 %
Available thickness:	3, 4, 5 and 6 mm	± 0.3 mm
Density:	approx. 800 kg/m³	
Physical Characteristics		
Tensile strength:	approx. 0.6 N/mm²	(ISO 1798)
Elongation at break:	approx. 60%	(ISO 1798)
Service temperature range:	- 30°C to 80°C	
Flammability rating:	B 2	(DIN 4102-1)
Heat transmission coefficient:	0.03 m² K/W for 3 mm slab	(DIN 52612)
Impact sound improvement:	ΔL = 20dB without covering	
	ΔL = 17dB under 8 mm tiles	(ISO 140-8/ISO 717-2)

Under Screed Acoustic Solutions

Made from recycled rubber granules. Solutions for constant loads up to 20t/m².

Features and benefits:

- European Technical Approval (CE label)
- Brilliant noise insulation with a low panel thickness
- Outstanding compressive strength and Load-bearing performance permanently elastic
- Highest resiliency even after years of use (does not compress and reduce sound absorption)
- Very low emission
- Water proofed and rot-proofed
- Very environment-friendly, recycled rubber
- Can be recycled again
- Fast and easy installation
- High pressure load capacity
- Elasticity and fast and easy installation low thickness of 4mm to 17mm for low
- Allowing planners to save heights in new buildings or adapt to given conditions in the case of renovation.

Applications:

- Production halls and depots
- Shopping centres
- Concert halls, cinemas
- Fitness centres
- Public buildings
- Schools, training centers
- Recording studios
- Acoustic test laboratories
- Hotels.

Application Sector

DAMTEC® Estra 3D is the ideal rubber underlay in floating screed / concrete slab systems with European Technical Approval, which has been granted by DIBt, the German Center of Competence in Civil Engineering.

Another application is for example underneath rigid floor elements on wooden sub floors. Also as edge strip it can be cut.

DAMTEC® Estra 3D is particularly quick and easy to install and is providing extremely high resistance to compressive loads and outstanding elasticity. It is equally well suited for applications in residential, office and commercial buildings.
