LESLEY PARK ROYAL - RESIDENTIAL DEVELOPMENT BELFAST

MAIN CONTRACTOR

P & K Mckaigue

DATE

August 2019

PROJECT

Destined to be one of Belfast's most prestigious developments, Lesley Park Royal will bring a range of Luxury apartments, semis, and detached houses to East Belfast. SDG alongside supply partner Isomass worked with contractor P & K McKaigue to propose the use of the Isocheck XL9 Screedcheck Impact Improvement System. Isomass calculated the exact build-up required to meet the relevant sound transmission standard.

Isocheck Screedcheck XL impact improvement systems are designed specifically for placement within a structural floor build up, directly below the screed. This acoustic layer isolates the screed from the structural sub-floor and provides enough impact absorption to place it amongst the top performing low density acoustic systems.

The Isocheck Screedcheck XL9 features a 9mm closed cell non-cross-linked foam layer. When installed correctly Screedcheck XL9 will enable compliance with Approved Document E.

Benefits of Screedcheck XL9 Include:

- NHBC Tested
- Closed cell composition prevents water ingress
- Lightweight and easy to handle
- Full build up calculations available on request
