HIGH RISE OFFICES ACOUSTIC FIT OUT

PROJECT SUMMARY

SDG were tasked with supplying acoustic solutions to a new office development in Derry/Londonderry. The client required a high-performing, visually appealing solution to address sound reverberation and absorption, aiming to create a modern and professional working environment

THE CHALLENGE

With large open-plan areas and strict aesthetic requirements from the client, SDG needed to supply an effective acoustic solution that not only controlled sound but also aligned with the architectural vision for a sleek, contemporary office space.

HIGH RISE OFFICES ACOUSTIC FIT OUT

OUR SOLUTION

SDG supplied a comprehensive range of acoustic systems using a lightweight and semi-rigid panel with high sound-absorbing performance. The versatility of the material made it ideal for varied spatial and interior design applications.

Our solution included:

- Custom suspended rafts, baffles, and ceiling grids
- Notch acoustic wall panels
- Hanging acoustic screens to partition different zones

Each element was tailored to both control acoustics and complement the visual identity of the building.

THE RESULTS

SDG's acoustic systems transformed the space into a functional and aesthetically pleasing workspace where sound won't hinder employee productivity. The ceiling systems now serve as both effective sound absorbers and distinctive design features—delivering on the client's expectations for performance and style.
